

THE SCANCAM PACKAGE

HARDWARE & INSTALLATION

Mobotix M15 Dual Lens Cameras

Intelligent German camera technology with ultimate clarity, extremely robust suited to the outdoor elements. Onboard image conversion means no DVR systems are required. Dual lens day and night for 24 hours optimum licence plate detection in all lighting conditions with no software licences required. This camera will last you 10 years plus.

Raytec Infrared Illuminators

English design, Raytec provide infra red illumination at night for licence plate detection. Safe for motorists as the lighting is not visible to the human eye. POE powered and managed by the Scancam system to ensure optimum levels of IR every night.

Netgear Managed POE + Switch

The Scancam system uses the best Netgear POE+ switches to power all equipment over Ethernet. There is no need to install additional electrical cabling saving time and money for each installation.

Apple iPad & Security Case

Arguably the best and most user friendly tablet on the market, Scancam has develop and unique iPad app that allows operators to interface with the system. It is simple and easy to use, secured in a stylish security case that can be installed in the best position for your operators.

Digital Display – The ultimate Deterrent

Key to deterring the opportunist. The digital display in customer view, displays the licence plates currently detected on the forecourt. The display is a commercial grade unit, which is bright and clear in all lighting conditions and designed to operate 24 hours a day.

Signage & Print Materials

Scancam provides signage and print materials four forecourt, including legal notices stickered to each pump. These aid the visual deterrent and ensure legal requirements have been met.

Installation

Included in your package are all installation costs. This includes equipment hire, fixtures, cabling and labour. Any special requirements will be outlined in the quote with its costing. Also included are all IT pre set up and configuration costs plus post install testing and camera tuning.

3-year Warranty

All devices are from industry leading manufacturers. However, Scancam provides peace of mind with a swap in and swap out replacement warranty for all major components on the system.

THE SCANCAM PACKAGE INCLUDED IN YOUR MONTHLY SERVICE CHARGES

The Scancam Portal

Core to the Scancam system, access to the portal is an essential part of managing incident reports. Scancam works with your management team to ensure all data is checked before triggering the debt collection process. This saves you time and money and significantly reduced the reporting time as we automate footage retrieval and link it to each report.

Software Maintenance & Updates

Included in your ongoing monthly subscription are ongoing maintenance and software updates and support. This includes your Apple iPad iOS device's software updates, portal, cameras and hardware issues, ongoing maintenance as well as access to our support desk which is monitoring your system 24 hours a day. We ensure your system is always on and up to date.

Training

Included the installation cost is our time for training your team on use of the Scancam system. This includes how to use the iPad app and manage the reporting process at management level using the Scancam portal. It is our aim to work with you and your team to integrate the system into your day to day operations, ensuring you receive the full benefits of Scancam.

Debt Recovery Services

Scancam is the first to offer a full end to end business solution including a debt recovery. Whilst theft is a crime, all offenders will be pursued. We cover the court costs and the debt collection process returning 100% of recovered funds to your bank account saving you both time and money.

Online & SMS Payments

Scancam makes it easier for motorists to pay back debt via the Fuel Recovery Services website and via a link to our portal received via SMS reminder message.

Safe & Secure Private Network

Scancam is a cloud based system. A unique device that manages all the system network and hardware, we create a Virtual Private network, which ensures all devices remain connected to the cloud and send signals in a secure manner that cannot be hacked. All data is transferred via the VPN using current encryption and is backed by the Microsoft Azure Platform.
